Webbing - Dyeing Tattoos

June 2012

## TRANSFER PAPER / FABRIC / WEBBING

### Conseils d'utilisation pour le papier de transfert Feuilles de 1m x 1.5m et 1m x 80cm

1. Préparez le morceau de thermoplastique choisi.
2. Coupez un morceau de papier de transfert légèrement plus petit que le thermoplastique préparé.
3. Mettez le thermoplastique dans le four et chauffez-le à sa température optimale conseillée.
4. Une fois la température atteinte, retirez le plastique du four et posez-le sur une surface plane.
5. Posez le côté imprimé du papier sur le plastique chaud. Assurez-vous de ne pas faire des plis ou des bulles d'air en appuyant légèrement et en lissant avec des gants thermiques.
6. Retirez le papier de transfert en le décollant délicatement après 15 à 30 secondes. Le processus de coloration est optimal dans les températures comprises entre 338°F (170°C) et 428°F (220°C).
7. Si nécessaire, il est possible de remettre le plastique dans le four. Thermoformez le plastique selon votre technique habituelle et assurez-vous de ne pas trop l'étirer pour ne pas déformer le motif. Cette méthode de coloration rapide permet de conserver la surface homogène et la couleur ne peut pas être enlevée par grattage. Cette technique ne modifie aucunement le processus de thermoformage sous vide. Les tons de couleurs dans la documentation peuvent être différents sur le produit fini.

La couleur peut être plus foncée ou plus Claire selon le type de plastique utilisé. Le papier de transfert collera au plastique si celui-ci est trop chaud ou si le papier est resté trop longtemps en contact avec le plastique chaud. Pensez à enlever le papier avant de procéder au thermoformage. Veuillez conserver le papier dans un endroit sec et frais.

**Il est recommandé de vaporiser du silicone avant de poser le papier de transfert sur le plastique. Pour améliorer la couleur du papier de transfert, vaporisez le papier et le plastique avant d'effectuer le transfert.**

**Meilleures conditions d'entreposage:** Dans un endroit sombre, sec et frais.

**Avertissement:** Le papier ne peut pas être utilisé dans le cas d'un thermoformage par emboutissage.

### Conseils d'utilisation pour le tissu de transfert Feuilles de 1m x 1.5m

Les tissus de transfert peuvent être utilisés pour imprimer des matériaux tels que le polypropylène (PP) et le polyéthylène (PE) soit par stratification soit par transfert thermique.

Le procédé de transfert sur du PP ou sur du PE est le même que pour le papier de transfert. Les tissus de transfert peuvent être stratifiés après avoir été cousus pour épouser la forme du positif et utilisés comme stockinette pour la première et la dernière couche de la stratification. Une fois celle-ci terminée, les côtés imprimés seront visibles à l'intérieur et à l'extérieur de l'emboîture.

**Meilleures conditions d'entreposage:** Dans un endroit sombre, sec et frais.

**Sangles:** Rouleaux de 25m de 1, 1.5 ou 2 pouces de large  
22 sortes disponibles !

## TRANSFER PAPER / FABRIC / WEBBING

### Transfer paper Instructions: **Sheets of 1m x 1.5m and 1m x 80cm**

1. Measure the piece of thermoplastic that you choose to use.
  2. Cut a piece of coloring paper slightly smaller than the plastic.
  3. Place the plastic into your oven and heat to its optimum temperature.
  4. When the optimum temperature is reached, remove the plastic from the oven and place on a flat surface.
  5. Place the coloring paper image side down on the hot plastic. Take care to prevent bubbles and wrinkles by using thermal gloves and very slight pressure.
  6. Remove the coloring paper by peeling it off from the plastic after 15 - 30 seconds. The actual coloring process takes place at a temperature of 338°F (170°C) to 428°F (220°C).
  7. The plastic may be returned to the oven if necessary.
- The plastic may now be formed in the usual manner. Take care to not over stretch the plastic, as this will distort the color image.

*This quick and easy method of coloring keeps the surface homogeneous and the color can not be scratched off. There are no changes in the vacuum forming process. Color shades in the brochure may differ from the shaded on the finished material. Color may be more intense or lighter depending on the material used. Coloring paper will stick to the plastic if it is overheated or if the paper is left in contact with the plastic for an excessive amount of time. Remove the coloring paper before vacuuming the thermoplastic. Please store papers in a dry and cool place.*

**It is recommended that you spray transfer paper with silicone spray prior to laying it on the plastic. To enhance the color of the transfer paper, spray both the plastic and the transfer paper with silicone spray before laying the transfer.**

**Best Storage Conditions:** Dry, cool dark place

**Warning:** The paper cannot be used during the deep drawing process

### Transfer fabric instructions: **Sheets of 1m x 1.5m**

*Transfer fabrics can be used for printing on PE and PP materials by thermal transfer printing or laminating.*

*The printing process is the same as transfer paper, both for PE and for PP materials.*

*Transfer fabrics can also be laminated. For this purpose they are sewn into shape and used like a tricot stockinette as the first and/or last layer in the laminate.*

*The printing faces the side that will be visible later.*

**Webbing:** **Rolls of 25m in widths of 1", 1.5" and 2"**  
22 designs available!
